

Minutes for Granite/Red Cedar Creek Distribution Meeting

Held on March 25, 1992

The meeting commenced at 3:45 P.M. Lee Sim called the meeting to order. Those in attendance were:

Lee Sim	Division of Water Rights
John Mann	Division of Water Rights
Glen Allred	
Buck Douglas	
George Douglas	
Cecil Garland	

John Mann read the minutes from last year's meeting. All in attendance agreed that the minutes were accurate and no changes were needed. Lee Sim went through the financial report for the previous year and all in attendance agreed that the report was accurate. Cecil Garland gave a short commissioner's report. There were two staff gages purchased last year for the pipelines from Granite Creek and Red Cedar Creek which supplies the Allred Reservoir but they have not yet been installed. Because of this, there were no measurements or records made of flows diverted during the remainder of the 1991 irrigation season or of flows into the reservoir since the first of November. However, the Douglas's have observed the flow and have estimated that the flow into the reservoir has totalled about 216 ac/ft. since the first of November. Glen Allred reported they are still looking into the installation of hydro-power plants on the two pipelines. He felt the hydro-power plant on the Granite pipeline would be installed this year and the one on Red Cedar Creek would be installed next year. As these installations are completed they will include totalizing meters which will make record keeping easier.

There was again some discussion about what the total quantity of Allred's right was. This quantification is important to the Douglasses so they can determine when their rights on Granite Creek are available for use. There was also some discussion about how the staff gages should be installed on either pipeline. Glen Allred agreed that he could have them in place by April 1, the start of the irrigation season. Glen also questioned whether the Douglasses' water rights on Cottonwood Creek and their well were supplemental to their rights on Granite Creek or if they were quantified as a sole supply from those sources. If they are supplemental to their rights on Granite Creek, Glen Allred felt measuring devices should be installed on those sources also so that when the Douglas's had reached the quantity of their right, water could then go back and be available for the Allred's. It was agreed that John Mann would investigate these issues and send a letter reporting what is available from our records and the water users agreed to abide by that determination.

Allred water is in name of Red Cedar Corp.

It was generally agreed that the budget should remain the same as last year and that Douglas's would be assessed only as we receive bills from the commissioner for his time and expenses. It was agreed to continue this year with the same compensation for the commissioner: a salary of \$10.00/hr and 0.25/mile for any mileage. It was also agreed that the commissioner would make a record of measurement twice a month during the irrigation season and once a month during the non-irrigation season and that he would submit a report next year to the State Engineer. It was also agreed that he would send a bill for time and travel to the State Engineer's office every three months.

It was agreed by both parties that Cecil Garland would continue as the commissioner for 1992 and there being no further business after that, the meeting was adjourned at 5:00 P.M.

*Store water in off irrig. season or not under
Red Cedar right?*
